Education

George Mason University | Fairfax, VA, USA

Master's — Data Analytics Engineering | December 2024 [Expected]

GPA: 3.8 / 4

GITAM University | Hyderabad, TG, India

Bachelor's — Computer Science & Engineering | June 2021

GPA: 3.0 / 4

Skills

Computational Languages: C, C++, Java, Python, R, SQL, Swift, HTML, CSS, JavaScript [Angular, React]

Technologies & Tools: Git, MS Office Suite, AWS (EC2, S3, RDS, Glue), Tableau, Docker, Windows, macOS, Linux

Certifications: Unmanned Aerial Systems Prototyping

George Mason University | November 2023

Google IT Professional Support

Google + Coursera | August 2020

Projects

Exploring Changes in Economy

January 2024 - May 2024

Central Banks v Digital Currency

R, Python, LSTM, Git, Web Development

- Explored the impact of digital currencies on central banking systems using analytical methods such as Fourier transforms, regression analysis, and machine learning techniques, presented in an Interactive Website.
- Delivered comprehensive insights into cryptocurrency volatility and price patterns, equipping policymakers and financial regulators with the analytical framework necessary to understand and navigate the challenges of maintaining monetary stability and formulating adaptive economic policies.

Integrated Analysis of Air Quality

August 2023 - November 2023

A Multi-Tool Approach

Python, R, SQL, Amazon Web Services, Big Data

- Executed comprehensive ETL operations to process the National Environmental Health Tracking Network dataset, meticulously analyzing the impact of air quality on respiratory health across the U.S.
- Conducted an in-depth analysis, with a focus on ozone and particulate matter, revealing significant correlations between air quality metrics and respiratory health outcomes, providing evidence-based recommendations for targeted public health interventions and advocating for enhanced EPA regulatory measures to mitigate adverse health effects.

FireFlyer - Automated Early Situational Awareness to Firefighters

September 2023 - November 2023

Unmanned Aerial Systems Prototyping

CAD, Prototyping, Machine Learning, Project Management, Pitch Incubation

- Led an 8-week intensive program focused on prototyping and problem-solving workshops, specifically addressing critical challenges faced by first responders.
- Developed an AI-based prototype for early situational awareness during fire incidents and effectively pitched the solution to a panel of judges, highlighting its potential to enhance emergency response and safety measures — Runner Up.

Customer Segmentation

August 2020 - December 2020

Using K-means Clustering in R

R, Principal Component Analysis, K-means Clustering, Regression Analysis

- Analyzed customer segmentation using PCA, factor analysis, and regression to identify satisfied consumers in various markets, resulting in targeted marketing strategies.
- Effectively enhanced the understanding of consumer satisfaction and happiness, which informed strategic decisions and improved customer retention.

Experience

Avishkar Software Labs | Hyderabad, TG, India

May 2019 - July 2019

Summer Intern — Junior iOS Developer

Swift Programming, Codebase Management, iOS App Development

- Effectively liaised with production teams to ascertain iOS development requirements, ensuring precise specification gathering and the delivery of expedient solutions.
- Partnered with design teams to refine application functionality, diligently maintained the codebase, and adeptly handled related operational tasks.

V. V. Technologies | Hyderabad, TG, India

May 2017 - Nov 2021

Part-Time — System Integrator, Network Engineer

Customer Fulfillment, Technical Analysis & Implementation

- Served as a System Integrator at a computer store, efficiently addressing and organizing customer requirements and providing tailored technical solutions.
- Specialized in developing network infrastructure for small businesses and home offices, ensuring robust connectivity and seamless operational setups.
